

Laboratory Task 1

Instruction: From the example scenario above, create additional two inquiries for each type of data analytics.

1. Descriptive:

- How many doses of the AstroJR COVID-19 vaccine have been administered in each country this month?
- How many vaccine doses are currently available in each region?

2. Diagnostic:

- Why did the demand for AstroJR's COVID-19 vaccine increase in certain countries?
- What factors caused delays in the distribution of vaccines to some regions?

3. Predictive:

- How many vaccine doses will be needed in each country next month?
- How many COVID-19 cases are expected to occur in the coming weeks?

4. Prescriptive:

- If vaccine demand is expected to increase, how should AstroJR allocate its available vaccine doses among different countries?
- If some regions are experiencing vaccine shortages, how should AstroJR adjust its production and distribution to meet the expected demand?
